

Long known for its expertise and pioneering new treatments – especially in diagnosing and treating congenital disorders – The Willson Heart Center at Valley Children’s provides comprehensive, family-centered pediatric care for all forms of cardiovascular disease for children from before birth to young adulthood. The Center uses advanced techniques and sophisticated, child-size instruments to perform even the most difficult procedures through the smallest incisions with equal or superior clinical results.

Cardiology services are provided on both an inpatient and outpatient basis. Emergency cardiac services are available 24 hours a day. The Center provides assessment and follow-up care for approximately 7,500 outpatient visits each year. Every effort is made to treat children in the outpatient environment close to the home, thereby reducing patient families’ stress and discomfort and need for excessive travel.

We perform approximately 9,700 annual echocardiographic studies, including transthoracic, transesophageal, fetal and intracardiac echocardiograms. We work in tandem with maternal-fetal medicine specialists and neonatologists to assist in managing prenatally diagnosed cardiac conditions. Our electrophysiology clinic provides assessment and follow-up care for outpatients with known or suspected cardiac conduction abnormalities, including medical genetics to specifically tailor therapy.

We offer outpatient cardiology services across the region to provide children and families access to care close to home. Some of our cardiologists live near and practice full-time at Valley Children’s pediatric subspecialty centers in Merced, Modesto and Bakersfield. We also provide pediatric cardiology services in Visalia and the Central Coast.

Our pediatric cardiology specialists are always available for consultations and urgent patient appointments.

Access Center

24/7 access for referring physicians
866-353-KIDS (5437)

Outpatient Referral

Referral forms online at valleychildrens.org/refer
FAX: 559-353-8888
